Thinking in the Age of AI

What should we still learn when AI can do almost everything?

SPEAKER

**Ing. Viera Krešňáková,
PhD.**

AI Developer

THE CORE QUESTION

**If AI could already do
95% of what you are
learning or need in your
job... what would you
still choose to learn?**

Would you keep learning at all?

**Maybe the
question is
already outdated.**

THE CONVICTION GAP

The problem is not that AI can be wrong.

**The problem is that it
can be *wrong* very
*convincingly.***

REAL CASE #1

A time series without time

Hourly weather data (Temperature · precipitation · wind speed · ...)

1. THE REAL STRUCTURE — TIME SERIES

2. ACTUAL CSV INPUT — NO TIME COLUMN

TEMP	PRECIP	WIND
14.2°C	0.0 mm	12 km/h
13.8°C	0.2 mm	15 km/h
13.1°C	0.5 mm	18 km/h
...		

No time information in the CSV → AI treated the rows as independent observations.

The temporal dependency became invisible.

REAL CASE #2

When “missing” data are actually reality

No waste collection on Sundays.

1. REALITY (EXPECTED SCHEDULE)

MON	TUE	WED	THU	FRI	SAT	SUN	MON
820 kg	760 kg	910 kg	840 kg	980 kg	1050 kg	NO COLL.	1420 kg

2. AI PREPROCESSING (INTERPOLATION ERROR)

MON	TUE	WED	THU	FRI	SAT	SUN	MON
820 kg	760 kg	910 kg	840 kg	980 kg	1050 kg	1200 kg*	1420 kg

The missing value had meaning. It was not a data-quality problem.

AI created a plausible number for an event that never happened (the truck simply never came).

TAKEAWAY LESSON

Context is not optional.

AI only sees what you give it.

Meaning, constraints and domain knowledge still come from you.

Missing context can turn a reasonable answer into the wrong solution.

MISSING CONTEXT

The critical piece

THE FLUENCY TRAP

Structure is **not** **correctness.**

An argument can use professional terminology, cite sources, and still be **wrong**.

Plausible reasoning can make a wrong conclusion feel right.

GENERATED ARGUMENT PROFILE

DIMENSION	STATUS	ASSESSMENT
Structure	complete	pass
Terminology	professional	pass
Reasoning	plausible	pass
Sources	present	pass
Ground Truth	verified	WRONG*

* THE CRITICAL FLAW

THE ILLUSION OF RIGOR

Professional structure, terminology and citations can make incorrect conclusions look trustworthy.

THE CRITICAL BOUNDARY

Don't outsource the thinking.

AI can help with

Drafting

Summarizing

Generating options

Analyzing patterns

Humans should still own

The problem

The assumptions

The decision

The responsibility

Use AI to extend your thinking - **not replace it.**

CLOSING THOUGHT

**So... what would
you still choose to
learn?**

Would your answer be different now?
